## Professional Summary

Software Engineer with 3+ years of experience owning 0 -> 1 product development in startup and enterprise environments, bringing a versatile set of skills in full-stack development, cloud infrastructure, and hands-on LLM integration experience.

## Experience

### Full Stack Developer - Word of Mouth Technologies, Inc.

Jan 2025 – Present

- Served as one of the early engineers for an AI-powered language learning platform, building production-ready applications from Figma designs through an **Angular** frontend and a **PostgreSQL** backend, and **AWS** cloud (EC2, S3).
- Integrated **Azure AI** Speech Services, including real-time speech-to-text, pronunciation assessment, and speech translation APIs to provide automated feedback and enhance learner outcomes.
- Containerized a lip-reading prototype using **LipNet ML** model with Docker, reducing model deployment time by **50%** through standardized containerization.
- Validated platform effectiveness by conducting pre/post learning assessments with early users, demonstrating **63%** improvement in pronunciation accuracy through Azure Speech assessment metrics.
- Collaborated with stakeholders to gather requirements, align on technical specifications, and incorporate feedback into product development cycles.

### Associate Software Developer - UnitedHealth Group

Jun 2022 – Dec 2023

- Developed **REST APIs** for job status tracking and automated SMTP email notifications for an on-prem enterprise deployment platform built with **Spring Boot**, **.NET**, and **SQL**, supporting PySpark, Scala, and Python applications.
- Contributed to migrating legacy ASP.NET frontend to **React** framework, implementing component-based architecture and state management that reduced frontend codebase by **30%**.
- Architected and maintained **Apache Airflow** DAGs to automate ETL workflows, batch processing, and streaming jobs, including automated services that reduced manual operational effort by **30%** and improved system reliability.
- Coordinated cross-functionally with software and data engineering teams using **Agile methodology** and Jira for task tracking, ensuring seamless project delivery.

### Software Developer Intern - UnitedHealth Group

Jan 2022 – Jun 2022

- Engineered an end-to-end React-based onboarding portal with automated CI/CD using **GitHub Actions**, centralizing KT sessions, access documentation, and resources for **200+** new hires annually.
- Implemented enterprise-grade security protocols, including **LDAP authentication** and SSO integration to enforce role-based access control and protect confidential information.
- Integrated OpenSearch for full-text search with optimized indexing, reducing documentation search time by **40%**, and validated functionality through automated testing using **Jest**.

## Projects

### FashON: AI-Powered Personal Styling App | (Flutter, MVVM, Firebase, OpenAI API)

- Built an AI-powered Flutter app for iOS and Android, enabling virtual wardrobe management, outfit recommendations, and outfit compatibility analysis using ML models, with outfit visualizations generated via the OpenAI DALL-E 2 API.
- Architected the app using MVVM and implemented secure authentication and access control with Firebase Authentication and Firestore security rules for user-level data isolation.

### ReelReady: Automated Social Content | (Next.js, AWS (S3, Lambda), Gemini API)

- Built an end-to-end automated reel generator with Next.js, enabling one-click posting to Instagram and Facebook, leveraging Gemini API for video and audio generation from fabric images.
- Architected AWS serverless infrastructure using Lambda for compute, S3 for storage, and CloudFront for content delivery, ensuring scalable and cost-efficient hosting.

## Technical Skills

**Programming Languages:** Java, Python, TypeScript/JavaScript

**Frontend Technologies:** React, Angular, HTML5, Tailwind CSS

**Backend & APIs:** Node.js, Spring Boot, Flask

**Databases:** PostgreSQL, MySQL, MongoDB

**Cloud & DevOps:** AWS (EC2, S3, Lambda, DynamoDB), Azure (Blob Storage, Speech Services, Functions)

**DevOps & Tools:** Docker, GitHub Actions, Git, Postman, Jira, Cursor

**Certifications:** [AWS Certified Developer - Associate](#)

## Education

M.S. in Computer and Information Science, Syracuse University

GPA: 3.72/4.0
